**Abstract:** In this study, Herpetofauna of the eastern region of the Amanos mountains in Turkey was investigated. A total of 319 samples were collected and 27 species from 17 amphibian and reptile families were described. Two of these species are urodeles, three are anurans, two are turtles, eleven are lizards and eight are snakes.

**Key Words:** Herpetofauna, East of Amanos Mountains

### Amanos (Nur) Dağlarının (Hatay) Doğu Bölgesinin Herpetofaunası

**Özet:** Bu çalışmada, Amanos dağlarının doğusunda kalan bölgenin herpetofaunası araştırılmıştır. Yapılan araştırmalarda bölgeden 17 Amfibî ve Reptil familyasından 27 ayrı türle toplam 319 örnek temin edilerek incelenmiştir. Bu türlerden ikisi kuyruklu kurbağa, üçü kuyruksuz kurbağa, ikisi kaplumbağa, onbiri kertenkele ve sekizi yılanlar grubundandır.

**Anahtar Sözcükler:** Herpetofauna, Amanos Dağlarının Doğu bölgesi

### Introduction

A list of the amphibians and reptiles of Turkey has previously been published by Baran (1). After the list was examined, samples from different regions of the country were collected at random. The collected samples were compared with each other and duplicates were discarded from the study.

Currently, studies show that certain Herpetofauna belonging to a particular city or range has increased (2-12). Some regions from which samples have been collected have had too few stations, causing some difficulty in introducing the Herpetofauna of that region. Collecting samples from a greater number of stations in those areas has lessened the difficulty.

New species have been introduced to neighbouring regions or countries such as Anatolia, East Turkistan, Greece, Bulgaria and Persia (13-18). Based on these publications, the study of Herpetofauna introducing detailed information about amphibians and reptiles is important in these regions and in the eastern region of the Amanos Mountains of Turkey.

The climate of the province is of humid and subhumid Mediterranean type, with annual precipitation between

570 and 1200 mm and mean maximum temperature of the hottest month (August) between 30 and 36 °C. It is situated in Thermo-Mediterranean and Eu-Mediterranean vegetation zones (19). It is interesting to note that the province, especially the costal zone of the Mediterranean, is a natural pathway used by afro-eremial faunistic elements to move into Anatolia. In addition, the Amanos mountain range is accepted as a typical barrier (or bordea) for the distribution of syrio-exemial faunal elements in the west or for that of the Mediterranean faunal element in the east (20,21). Also, this mountain range is accepted as a part of the hypothetical Anatolian Diagonal which possibly affected the faunal structure of Anatolia (20).

Thus, we believe that determination of the herpetofauna of Hatay will make an important contribution to the fauna of Turkey.

### Materials and Methods

The material (a total of 319 samples) used in our study, are kept in the Department of Biology, Science and Arts Faculty, Uludağ University. The samples were

collected at different times. However, all have been preserved according to standard methods (9).

Identification of the amphibian and reptile species collected from the areas of study were made by utilizing available published literature (22-28). The total of 27

species identified consists of 17 families of amphibia and reptiles: 5 amphibia, 2 turtles, 11 lizards and 8 snakes. The localities of the samples collected are shown in the Figure. In addition to the map, a list of species found in each area is shown below. The numbers in parentheses

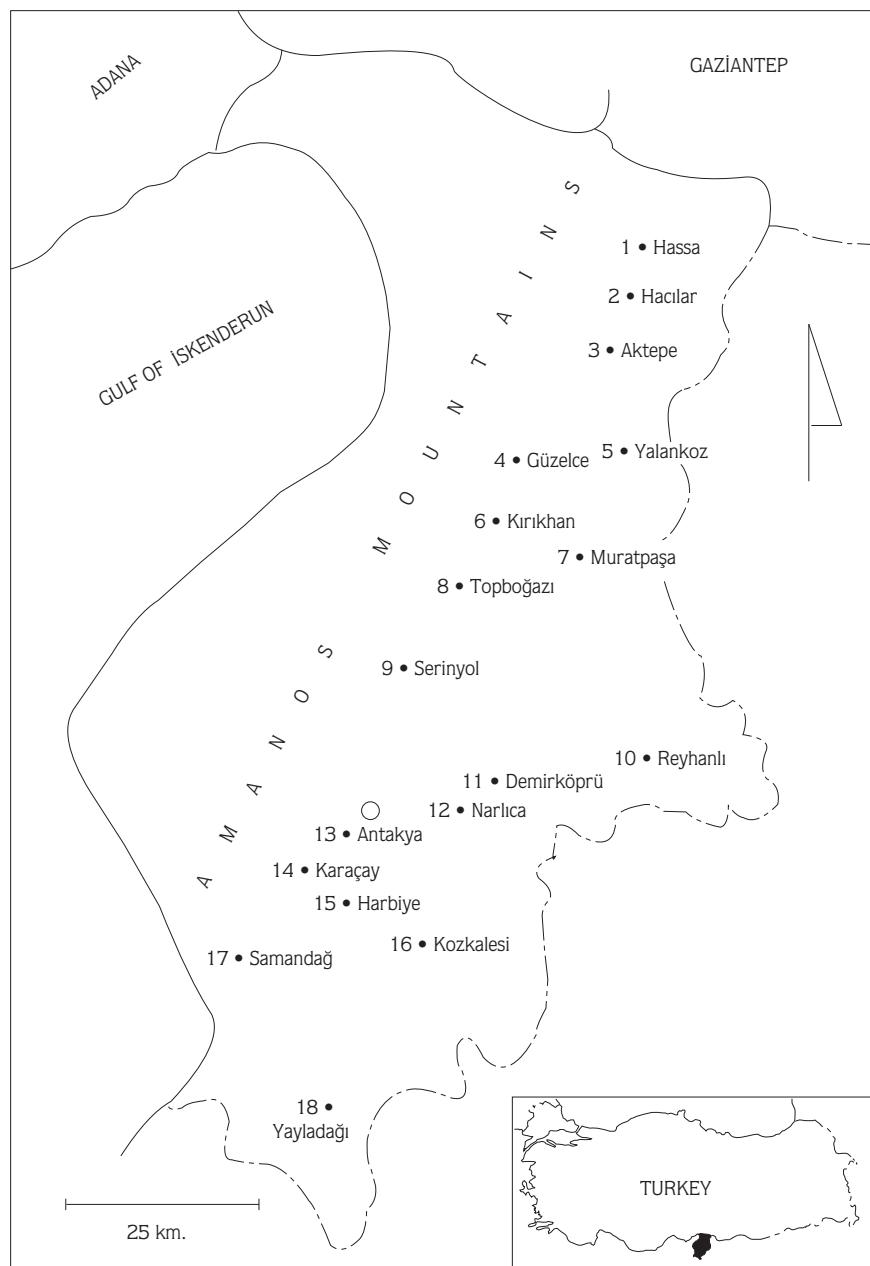

Figure 1. Material collecting localities: 1- Hassa, 2- Hacilar, 3- Aktepe, 4- Guelce, 5- Yalankoz, 6- Kirikhan, 7- Muratpasa, 8- Topbozazi, 9- Serinyol, 10- Reyhanli, 11- Demirkopru, 12- Narlica, 13- Antakya, 14- Karaçay, 15- Harbiye, 16- Kozkalesi, 17- Samandağ, 18- Yayladağ

identify a particular region on the map where that species was located.

*Salamandra salamandra* (15); *Triturus vittatus* (5,6); *Rana ridibunda* (1,3,4,6); *Bufo viridis* (1,3,4,6,16,17); *Hyla savignyi* (1,3,5,6,7,17); *Mauremys caspica* (5,6); *Testudo graeca* (6); *Cyrtopodion kotschy* (2,16); *Hemidactylus turcicus* (6); *Laudakia stellio* (2,6,8,10,12,15,18); *Ophisaurus apodus* (16); *Lacerta trilineata* (18); *Lacerta laevis* (4,6,7,11,13,15,16); *Ophisops elegans* (2,4,6,8,18); *Ablepharus kitaibeli* (5,8,16); *Mabuya vittata* (1,4,6,9,14,16,17,18); *Chamaeleo chamaeleon* (6), *Blanus strauchi* (16,17,18); *Typhlops vermicularis* (1,6,16); *Eryx jaculus* (6); *Coluber jugularis* (6,7,16,18); *Coluber najadum* (10); *Eirenis modestus* (16,18); *Eirenis rothi* (6); *Malpolon monspessulanus* (2,15); *Natrix tessellata* (6,7,11,13); *Vipera lebetina* (17).

#### List of the species

##### Familia: Salamandridae

*Salamandra salamandra* (Martens) 1885

Material N = 17: 9 ♂♂, 8 ♀♀

*Triturus vittatus* (Gray) 1835

Material N=7: 1 ♂, 6 ♀♀

##### Familia: Ranidae

*Rana ridibunda* Pallas, 1771

Material N=24: 9 ♂♂, 12 ♀♀, 1 juv.

##### Familia: Bufonidae

*Bufo viridis* Laurenti, 1768

Material N=36: 22 ♂♂, 14 ♀♀

##### Familia: Hylidae

*Hyla savignyi* (Audoin) 1827

Material N=29: 21 ♂♂, 8 ♀♀

##### Familia: Emydidae

*Mauremys caspica* (Gmelin) 1774

Material N= 16: 7 ♂♂, 9 ♀♀

##### Familia: Testudinidae

*Testudo graeca* Linnaeus, 1758

Material N= 4: 2 ♂♂, 2 ♀♀

##### Familia: Gekkonidae

*Cyrtopodion kotschy* (Steindachner) 1870

Material N= 2: 2 ♂♂

*Hemidactylus turcicus* (Linnaeus) 1758

Material N= 4: 2 ♂♂, 2 ♀♀

##### Familia: Agamidae

*Laudakia stellio* (Linnaeus) 1758

Material N= 36 : 13 ♂♂, 23 ♀♀

##### Familia: Anguidae

*Ophisaurus apodus* (Pallas) 1775

Material N= 1 : 1 ♂

##### Familia: Lacertidae

*Lacerta trilineata* Bedriaga, 1886

Material N= 3 : 1 ♂, 2 juv.

*Lacerta laevis* Gray, 1838

Material N= 23: 17 ♂♂, 6 ♀♀

*Ophisops elegans* Menetries, 1832

Material N= 21: 10 ♂♂, 11 ♀♀

##### Familia: Scincidae

*Ablepharus kitaibeli* (Bibron-Bray) 1832

Material N= 5: 3 ♂♂, 2 ♀♀

*Mabuya vittata* (Oliver) 1804

Material N= 32: 18 ♂♂, 14 ♀♀

Familia: Chamaeleonidae

*Chamaeleo chamaeleon* (Linnaeus) 1758

Material N= 2: 1 ♂, 1 ♀

*Malpolon monspessulanus* (Hermann) 1804

Material N= 2: 2 ♀♀

Familia: Amphisbaenidae

*Blanus struchi* (Bedriaga) 1884

Material N= 13: (13 ♂♂ + ♀♀)

*Natrix tessellata* (Laurenti) 1758

Material N= 5: 1 ♂, 2 ♀♀, 2 juv.

Familia: Typhlopidae

*Typhlops vermicularis* Merrem, 1820

Material N= 17: (17 ♂♂ + ♀♀)

Familia: Viperidae

*Vipera lebetina* (Linnaeus) 1758

Material N= 1: 1 juv.

Familia: Boidae

*Eryx jaculus* (Linnaeus) 1758

Material: N= 1: 1 ♀

Familia: Colubridae

*Coluber jugularis* Linnaeus, 1758

Material N= 5: 5 juv.

*Coluber najadum* (Eichwald) 1831

Material N= 1: 1 ♀

*Eirenis modestus* (Martin) 1838

Material N= 6: 2 ♂♂, 3 ♀♀, 1 juv.

*Eirenis rothi* Jan 1863

Material N= 6: 5 ♀♀, 1 juv.

## Discussion and Conclusion

During the later part of the study of herpetofauna, new species and subspecies were introduced. Therefore, detailed investigations of amphibia and reptiles in the study regions proved to be valuable.

When the study began, 27 of the known 33 species of amphibia and reptiles were identified in the research area. The species listed in the literature which could not be located in the research area include: *Pelobates syriacus*, *Bufo bufo*, *Trionyx triunguis*, *Chalcides ocellatus*, *Eumeces schneideri*, *Eirenis collaris*, *Eirenis lineomaculatus*, *Rhyncocalamus melanocephalus* and *Telescopus fallax*. The reptile species (*Ophisaurus apodus* and *Coluber najadum*) not listed in the literature were found and identified in the research area for the first time. Therefore, the number of species now known to be living in the research area is 36.

The importance of this study lies in the discovery of 3 additional species in the area of research. The introduction and identification of amphibia and reptiles living in the area of research will influence biological diversification and faunistic studies in the future.
